They are  $T_{co}$ ,  $T_{ho}$ , and  $q$ . We need three equations to solve for these three unknowns. The first equation to use represents the heat transfer rate ( $q$ ) into the cold fluid:  $q = (dm c /dt)c_{pc} (T_{co} - T_{ci})$  The second equation to use represents the heat transfer rate ( $q$ ) out of the hot fluid. This is equal to the heat transfer rate into the cold fluid. Heat Exchanger - Real World Physics Problems And Solutions More emphasis on the topics of physics included in the SAT physics subject with hundreds of problems with detailed solutions. Physics concepts are clearly discussed and highlighted. Real life applications are also included as they show how these concepts in physics are used in engineering systems for example.
