Unsaturated Saturated And Supersaturated Solutions An unsaturated solution is one in which a little amount of solute has been added to the solvent. A solution is said to be saturated when a solute is not able to dissolve in the solvent. A supersaturated solution, on the other hand, is when the excess of solute is dissolved in the solvent as a result of changes in temperature, pressure or other conditions. Unsaturated vs Saturated vs Supersaturated solutions ... Three types of solutions 1. The figure below illustrates the above process and shows the distinction between unsaturated and saturated. Saturated and Unsaturated Solutions | Chemistry for Non-Majors A supersaturated solution contains more dissolved solute than required for preparing a saturated solution and can be prepared by heating a saturated solution, adding more solute, and then cooling it gently. Excess dissolved solute crystallizes by seeding supersaturated solution with a few crystals of the solute. Supersaturated Solution - Definition, Examples ... A solution is said to be unsaturated in which all the solute dissolves into the solvent and the solvent can be either liquid or gas. It is the solution that has not reached the saturation point into which more solute can be included. A solution is said to be supersaturated when there is more dissolved solute as compared to a saturated solution.
